# **Omid** Heidari

Front-End Developer · **React, Next.js, TypeScript**

contact@heidariomid.ir | heidariomid.ir | github.com/heidariomid | linkedin.com/in/heidariomid | ● Open to remote roles

## Summary

Front-end developer who ships the whole feature: React and Next.js interfaces in strict TypeScript, and the back end they need, from PostgreSQL row-level security to a headless CMS and server-side API calls that keep keys out of the browser. Freelancing since 2021, with a client site live in production. Seeking a front-end or full-stack role on a product team.

## Experience

### Freelance Web Developer

2021 – Present

Build web apps for small clients, from requirements and stack choice to deployment and handover.

**Ghanad Bashi Asal** · Ordering site for a home bakery · 2026 — ghanadbashiasal.ir | Code

`Next.js · Payload CMS · PostgreSQL · TypeScript · Tailwind CSS`

- Launched a live Persian, right-to-left ordering site on the Next.js 16 App Router, Payload CMS 3 and PostgreSQL; the owner, who does not code, manages products, prices, photos and orders in its Persian admin.
- Chose Payload over Sanity (no Persian editor) and WordPress (plugin upkeep), and embedded it in the Next.js app.
- Built the cart and order flow: shop-style order numbers, deposit receipt upload, SMS.ir texts to the baker on new orders and to customers on status changes, optional phone one-time codes, and on-demand page revalidation.

**Amazon.ae Shop** · Persian storefront for Amazon.ae · 2023, rebuilt 2026 — amazon-ae.vercel.app | Code

`Next.js · Redux Toolkit · TanStack Query · Supabase · Tailwind CSS`

- Built the storefront for a client's WooCommerce shop in 2023 with Next.js, Redux Toolkit and TanStack Query; in 2026 rebuilt the back end on Supabase to run it as a standalone demo.
- Kept every Rainforest API call in Next.js route handlers behind a 24-hour PostgreSQL price cache and a 30-call daily cap, and added email one-time-code sign-in with row-level security on every table.

### IT Department · Kish Exchange

2017 – 2020

- Built small WordPress sites and improved project UI and UX through user research and requirements gathering.
- Designed logos, posters and social media graphics in Photoshop and Illustrator, and produced product tutorial videos.

## Projects

**AI Trip Planner** · Full-stack web and mobile app · 2026 — plan-trip-ai.vercel.app | Code

`React Native · Expo Router · TypeScript · Supabase · NativeWind`

- Built one Expo and React Native codebase in strict TypeScript that runs as an installable web app and on phones; an AI assistant streams its reply as action cards, and nothing is saved until the traveller taps one.
- Called Gemini and Cloudflare Workers AI only from Supabase Edge Functions, so model keys never reach the app.
- Enforced owner, editor and viewer roles on shared trips with PostgreSQL row-level security, kept the schema in ordered SQL migrations, and added email and Google sign-in with real account deletion.

**Crypto Prices** · Market data table · 2022, rebuilt 2026 — cryptocurrenciesprice.vercel.app | Code

`Next.js · TanStack Query · TypeScript · Tailwind CSS · Vitest`

- Built a searchable, sortable table of the top 250 cryptocurrencies within CoinGecko's free rate limit: one request, cached for 5 minutes in TanStack Query, and no retries on HTTP 429.
- Stored page, search and sort in the URL for shareable views, with Vitest and React Testing Library tests.

## Skills

**Front end:** React, Next.js, TypeScript, JavaScript, HTML, CSS, Tailwind CSS, Redux Toolkit, TanStack Query, REST APIs
**Back end (working knowledge):** Supabase, PostgreSQL, Payload CMS, Node.js, NestJS, GraphQL, Apollo Client
**Mobile (working knowledge):** React Native, Expo, Expo Router, NativeWind
**Testing and tools:** Vitest, Jest, React Testing Library (working knowledge); Git, GitHub, Vercel, Figma (basic)

## Education

**MSc in Information Technology Management** · Shahid Beheshti University, Tehran — 2017 – 2019

**Bachelor of Business Administration** · Allameh Tabataba'i University, Tehran — 2011 – 2015

Courses: 7Learn (full-stack JavaScript, design patterns), Frontend Masters, Nomad Coders, Code with Mosh, Udemy
