Omid Heidari

Front-End Developer · **React, Next.js, TypeScript**

contact@heidariomid.ir | heidariomid.ir | github.com/heidariomid | linkedin.com/in/heidariomid
Kish Island, Iran | Open to remote work and relocation

Summary

Front-end developer specializing in React, Next.js and TypeScript, building ordering, e-commerce and AI-assisted web and mobile apps with the back end they need. Freelancing since 2021, with a client ordering site live in production.

Experience

Freelance Web Developer · Sole developer on client projects | 2021 – Present

Ghanad Bashi Asal · Client project, live · 2026 | ghanadbashiasal.ir | github.com/heidariomid/ghanadbashi-asal
Stack: Next.js 16 · Payload CMS 3 · PostgreSQL · TypeScript · Tailwind CSS

- Delivered and handed over a home bakery's ordering site: the owner, who does not code, updates products, prices and photos and tracks orders in a Persian admin, and pages refresh as soon as content changes.
- Chose Payload over Sanity (no Persian admin) and WordPress (ongoing upkeep), running it inside Next.js.
- Implemented the order flow: cart, shop-style order numbers, deposit-receipt upload, SMS.ir texts to the baker for new orders and to customers on status changes, and optional phone one-time codes.

Amazon.ae Shop · Client project · 2023, rebuilt 2026 | amazon-ae.vercel.app | github.com/heidariomid/amazon-ae
Stack: Next.js · Redux Toolkit · TanStack Query · Supabase · Tailwind CSS

- Developed a Persian Amazon.ae storefront for a client's WooCommerce shop, since rebuilt on Supabase as a demo.
- Routed every Rainforest API call through Next.js Route Handlers to keep the key off the browser; a 24-hour PostgreSQL price cache and a 30-call daily cap keep the demo free to run.

Web and Graphic Design · IT Department, Kish Exchange | 2017 – 2020

- Built small WordPress sites and improved project UI through user research and requirements gathering.
- Designed logos, posters and social media graphics in Photoshop and Illustrator, and made product tutorial videos.

Personal Projects

AI Trip Planner · Web and mobile app · 2026 | plan-trip-ai.vercel.app | github.com/heidariomid/ai-trip-planner
Stack: React Native · Expo Router · TypeScript · Supabase · NativeWind

- Built one Expo codebase that runs as an installable web app and on phones; an AI assistant drafts days, places, bookings and a packing list as streamed action cards, and nothing is saved until the user taps one.
- Called Gemini and Cloudflare Workers AI only from Supabase Edge Functions, so no API key ships with the app.
- Enforced owner, editor and viewer roles with PostgreSQL row-level security (RLS), defined in ordered SQL migrations.

Crypto Prices · 2022, rebuilt 2026 | cryptocurrenciesprice.vercel.app | github.com/heidariomid/list-of-currencies
Stack: Next.js · TanStack Query · TypeScript · Tailwind CSS · Vitest

- Fit a searchable, sortable table of the top 250 cryptocurrencies into CoinGecko's free rate limit: one request loads the list, TanStack Query caches it for five minutes, and HTTP 429 responses are not retried.
- Kept page, search and sort in the URL for shareable views, tested with Vitest and React Testing Library.

Skills

Front end (proficient): React, Next.js, TypeScript, JavaScript, HTML, CSS, Tailwind CSS, Redux Toolkit, TanStack Query, REST APIs, right-to-left (RTL) layouts
Back end (working knowledge): Supabase, PostgreSQL, Payload CMS, Node.js, NestJS, GraphQL, Apollo Client
Mobile and testing (working knowledge): React Native, Expo, Vitest, Jest, React Testing Library
Tools: Git, GitHub, Vercel; Cypress and Figma (basic)
Languages: Persian (native), English (intermediate)

Education

MSc in Information Technology Management · Shahid Beheshti University, Tehran | 2017 – 2019
Bachelor of Business Administration · Allameh Tabataba'i University, Tehran | 2011 – 2015
Courses: Frontend Masters, 7Learn (full-stack JavaScript), Nomad Coders, Code with Mosh
